

Number game update

Author: Kyle Warchuck

This functions just like the last number game but this checks to make sure the input is a number

Pseudocode

```
start
guessesused = 0
num = random 1-10
while guessesused < 10
  if guessesused = 10 break
print you lose
guess = input
if guess isn't numeric re try
  guessesused + 1
if guess < num
  print too low
if guess > num
  print too high
if guess = num break
print you win
stop
```
